

FLYWHEEL ASSEMBLY

ABSTRACT OF THE DISCLOSURE

The flywheel assembly for transmitting torque from the crankshaft 191 of the engine has a second flywheel 103, a damper mechanism 104 and a support member 119. The damper mechanism 104 elastically connects the second flywheel 103 to the crankshaft 191 in the rotational direction. The support member 119 supports and positions the second flywheel 103 on the crankshaft 191 in the radial direction.
